PA Air National Guard Facility Uses 9000-MTR Hose Reels

Application Spotlight Location:
Pennsylvania Air National Guard

Monoxivent Sales Rep:
Effective Controls
New Ringgold, PA

Monoxivent's 9000-MTR **Hose Reel** was used to **remove toxic exhaust fumes** from **military vehicles** at the Pennsylvania Air National Guard. Monoxivent's motor-operated hose reels are the premier solution to exhaust extraction. They provide the answer for customers who have obstructions, which prohibit the use of other types of **overhead-exhaust systems**. At the Air National Guard facility, Monoxivent used a combination of its' 4000 and 5000 Series hose. The high-temperature silicone nomex (orange hose) was used closest to the exhaust pipe, while the medium-temperature polyester coated (red hose) was used for the remainder of the exhaust hose.

MONOXIVENT®

Source Capture Systems

Complete the package by adding a direct-mount fan, which allows a complete-stand alone system. Or connect to ductwork and a central fan. These reels are offered with a 4-, 5-, 6-, or 8-inch high temperature silicone nomex or a medium-temperature polyester hose. These reels may be controlled by either a wall-mounted switch or by infrared remote control.
